ethanol

ETHANOL POWERS THE INDYCAR® SERIES.

This year the green-flag-waving IndyCar® Series is powered by America's high-performance renewable fuel – ethanol. And, because fuel enriched with 10% ethanol performs well in all vehicles on the road today, you too can get a splash of power in every tank. Even better – ethanol-enriched fuel reduces harmful tailpipe emissions.

So choose ethanol-enriched fuel next time you fill up. If you don't see it, tell the gas station manager you want the fuel that's both clean and green – ethanol.

Visit www.drivingethanol.org to learn more about high-performance ethanol.
